We are HackGB!

Ready to rise to the challenge?

HackGB is UW–Green Bay's first-ever collegiate hackathon, bringing together students who love building, creating, and solving problems with technology.

Whether you're a software developer, hardware enthusiast, designer, or someone with a great idea, **HackGB** is a place to learn, collaborate, and bring projects to life alongside other passionate students.

Join us on **October 17–18** for 24 hours of coding, caffeine, and teamwork. You'll have the chance to meet new people, learn new skills, build something meaningful, and compete for prizes– all in one unforgettable weekend.

Come help launch a new tradition at UW–Green Bay and be part of the very first **HackGB**!

Why Sponsor HackGB?

Your support would contribute to the growing generation of creative minds and allow us to make this event happen. All contributions will be used to cover the cost of a venue, food and refreshments, t-shirts and apparel, and everything required at a hackathon. This will allow hackers to be able to focus on launching their ideas at the end of the event.

Who is hosting HackGB?

HackGB is hosted by **Google Developer Groups (GDG) on Campus- University of Wisconsin- Green Bay**. GDG-UWGB is one of the most active organizations on campus, dedicated to bridging the gap between classroom theory and real-world application. We host technical workshops, speaker sessions, and project builds that empower students to grow as developers and leaders. Organizing **HackGB** is our way of scaling that impact and cementing **Green Bay** as an emerging tech hub.

Sponsorship Experience

Sponsors are what allow our event to thrive and create a positive experience for our hackers. Whether it be through sharing your own experiences, providing technical mentorship, or introducing hackers to exciting opportunities, you're helping us to shape the lives of many emerging developers, designers, and builders.

Recruitment

Resumes and Profiles

Have access to resumes, GitHub repositories, and LinkedIn profiles of some of the most competitive students in the midwest tech scene.

Recruiters

Send recruiters to talk directly to our participants about summer internships or full-time jobs at our mini career fair before and throughout the event.

On-site Interviews

Conduct on-site interviews with hackers in a private room to find the person who is the best fit for your company right at the event.

Watch Project Development

Observe the ultimate “behavioral interview.” You will see how participants function in a high-pressure project delivery environment.

Connection

Provide Mentorship

Send mentors to assist our participants in using your company's API or platform, building lasting developer loyalty.

Sponsor Prizes

Sponsor a specific prize that encourages hackers to use your platform or inspires them to build a solution to a problem that you are passionate about.

Brand Marketing

Introduce Yourself

Showcase your company and product to hundreds of driven individuals who are passionate about the field of technology.

Brand Recognition

Offer promotional materials (stickers, t-shirts, water bottles, etc.) to build strong, lasting brand recognition.

Hacking Tracks

Environment & Sustainability

This track challenges teams to develop software and hardware solutions aimed at resource conservation, clean energy, and climate action. Projects will tackle real-world ecological issues by combining environmental data with modern digital tools.

Education

Participants will design platforms and tools aimed at making learning more accessible, personalized, and engaging for students of all ages. This track focuses on shaping the future of digital literacy and empowering educators through modern EdTech solutions.

Industrial

Teams will engineer solutions to modernize supply chains, optimize manufacturing, and improve workplace safety through automation and data analysis. This track is dedicated to tackling complex, large-scale problems to bring physical industries into the digital era. By deploying predictive models or data processing frameworks, participants will create prototypes that streamline operations and ensure safer environments.

Healthcare & Wellness

Developers will build applications and systems focused on improving patient care, mental wellness, and secure health data management. These projects address real-world clinical and lifestyle challenges to promote better public health outcomes. Hackers can design secure clinic workflows, minimalist mobile apps for wellness tracking, or tools that assist in medical data analysis.

Sponsorship Tiers

Choose the perfect package to ignite your brand's presence at HackGB. Custom tier configurations are also available upon request.
